PROJECTS

1. Astha App

- Developed a full-stack medical appointment system using React, Tailwind CSS, ASP.NET Core, and MS SQL Server.
- Enabled secure login, registration, and role-based access for doctors and patients.
- Implemented appointment booking based on location, OPD, and doctor availability.
- Built doctor-side tools for submitting reports and tracking diagnosis.

2. Algo Visualizer

- Created an interactive React web app using Framer Motion for visualizing sorting and searching algorithms.
- Added step-by-step animation, speed control, and random data generation for educational use.

3. Myntra Clone

- Built a frontend-only Myntra-inspired e-commerce site using React and Tailwind CSS.
- Included wishlist, cart functionality, and category-based filtering.
- Integrated fake APIs for user data persistence.

4. TODO App

- Developed a task manager app with add, edit, and delete features and a smooth user interface.

5. QR Generator App

- Created an app that generates downloadable JPG QR codes from text, images, or links.
